

**18. Go to any website by a single click or fill up forms on the go!**

Imagine being able to go to any website by just one click.

For instance you just click on Gmail and the software goes there, enters log in name , password and goes in.

Will that not be cool?

Also this software enables you to lot of other things like store passwords, helps you generate passwords (which are difficult to break into) etc

Goto:

<http://www.roboform.com/download.html>

and download Roboform software.

Then to know how to use it

Go to;

<http://onemansblog.com/2007/04/01/one-mans-roboform-demonstration-video/>

This is a simple video which tells you how to use Roboform.

Once you have done this, all you need is one password (make it real good) for Roboform and then Roboform takes over.

It will also help you fill forms on the website- once you have stored all your key data in Roboform , you just let it fill up forms like a breeze.

A really cool software i use!

One more software to make you lazier!
