

7. PT –Check how strong your password is

It looks as if our entire life depends on how strong the password is!

Things are likely to become harder!

With really smart hackers all around the world, it will take very little time for them to break your password unless you know how to make it strong and avoid common pitfalls.

You may think you have a smart password but you need to test it.

Now that is exactly what this website does.

You go to:

<http://www.microsoft.com/protect/fraud/passwords/checker.aspx>

and test your password by just entering it.

The result may surprise you.

Also read: [Strong passwords: How to create and use them](#) on the same web page.

You may save yourself a lot of headache later.
