4 PT-Want to know if a flight will be delayed?

(Productivity tools will feature cool features which help in increasing productivity, which i have tried and tested)

Tool: Website which informs you the probability that a flight will be delayed before hand- sorry only in USA!

Website: http://www.flightcaster.com/

What the website does:

Enter the Airline,   flight no. and date

 Or

The origin, destination and date

The website tells you:

- Predicted arrival details –say

    o   3% on time

    o   14% less than 60m late

    o   83% more than 60m late

- and the estimated departure and arrival time.

This will help you to re book your flights in time;

if you pay $10 you can get the Blackberry or iPhone version.

What we need is the Indian version, so we can switch from say Jet Airways to Indian Airlines well in time before others, if a flight is expected to be delayed.

Of course if all of them are expected to be delayed, take a book out to read!
