

### 15. Search like a Pro-Bing-3

**Bing** has got some cool features which **Google** does not have.

1. **Switch to Google without retyping searched item.**

Search something in Bing and just replace 'bing' with 'google' by editing the address bar -do not disturb other items in the address bar; now you can get results from Google for same search item without retyping subject!

2. **Find links** from any domain name by typing **linkfromdomain:domainname**

for instance :

**linkfromDomain:icai.org** gets you all links from icai.org

3. If you want **specific types of files** like doc, pdf, xls etc. use  
**contains: file type subject**

For instance:

**contains:ppt satyam** gets you all powerpoint presentations on Satyam
